

Moving from a Networked/Multiple User Installation to a Local/Single User Installation

If you originally installed the DWS software on a networked or shared drive and now need to move to a local/single user installation, follow the instructions below.

To Move from a Network to a Local Installation:

1. Locate the **DWSERVER.K10** directory. It should reside either on a network or shared drive. If you do not know where it is, log into the ERAS DWS software and:
 - Click on **System | System Information**.
 - You will see the parameter **Server Path** in **blue** and **underlined**. The value for this is where your **DWSERVER.K10** is located.
 - This entire directory (**DWSERVER.K10**) needs to be moved from the network/shared drive to the PC's local drive (C:).

Parameter	Value
Institution	
Institution Name:	Educational Commission for Foreign Medical Graduates
Institution ID:	920000000002
Unit ID:	ecfmgd__
School Code:	002
Application Year:	2010
Installation Date:	04/10/2009 09:38:19 AM
Server	
Reference Database Version:	15.0.0
<u>Server Path:</u>	<u>K:\ERAS2010\Software testing\DWS\DWSERVER.K10</u>
<u>UNC Path:</u>	<u>\\NETAPP2\GROUPS\ERAS\ERAS2010\Software testing\DWS\DW...</u>
Drive Type (K:):	Network Drive
File System (K:):	NTFS
Disk Capacity (K:):	1,401,877,327,872 Bytes 1,305.6 GB
Disk Free Space (K:):	311,248,097,280 Bytes 289.87 GB
Last Backup:	NA

2. Right click the **DWSERVER.K10** directory.
3. Click **Copy**.
4. Open the local drive where you want to move the **DWSERVER.K10** directory, by either using **My Computer** or **Windows Explorer**.
5. Right click anywhere in the local drive window.
6. Click **Paste**.
7. Once the **DWSERVER.K10** directory is copied over the client must be reinstalled (see instructions for local user installation) so that it is properly mapped to the correct drive.
