

Prevention of Alzheimer's disease. —

Cure for prostate cancer. —

Prevention of strokes. —

Prevention of asthma. —

Medical research is the beginning of hope for patients suffering from serious illness. Over the years, research through the National Institutes of Health (NIH) has resulted in spectacular progress—a 70% reduction in death rates for coronary heart disease and stroke, a 40% reduction in infant mortality, and a 30% decrease in chronic disability among seniors. Life expectancy has increased, death rates from cancer are declining, and new treatments have virtually eliminated transmission of the HIV virus from mother to child and made HIV/AIDS a treatable, chronic disease.

Today, federal support for research through the NIH amounts to just \$94 per American. Imagine the progress that could be made through increased funding. It's one of the best investments we can make in our future.

**Congress: Make medical research a national priority.
Increase funding for NIH.**

**RESEARCH
MEANS HOPE**

MORE FUNDING TODAY.
MORE MIRACLES TOMORROW.

Research Means Hope
