Statement by the Association of American Medical Colleges on
“COVID-19 Health Care Flexibilities:
Perspectives, Experiences, and Lessons Learned”
Submitted for the Record to the
Committee on Finance
United States Senate
May 19, 2021

The AAMC (Association of American Medical Colleges) thanks the Senate Finance Committee for convening the May 19 hearing, “COVID-19 Health Care Flexibilities: Perspectives, Experiences, and Lessons Learned” and for the opportunity to provide written comments for inclusion in the public record.

The AAMC is a not-for-profit association dedicated to transforming health through medical education, health care, medical research, and community collaborations. Its members are all 155 accredited U.S. and 17 accredited Canadian medical schools; more than 400 teaching hospitals and health systems, including Department of Veterans Affairs medical centers; and more than 70 academic societies. Through these institutions and organizations, the AAMC leads and serves America’s medical schools and teaching hospitals and their more than 179,000 full-time faculty members, 92,000 medical students, 140,000 resident physicians, and 60,000 graduate students and postdoctoral researchers in the biomedical sciences.

The AAMC appreciates the work that this Committee, the Congress, and the Centers for Medicare and Medicaid Services (CMS) have done to provide important flexibilities to ensure that providers can continue to deliver quality health care for patients during the public health emergency (PHE). Many of these flexibilities have proven to expand access to care and should continue to be integrated into the health care system beyond the end of the PHE. Specifically, the AAMC urges Congress to:

- Remove patient location and rural site requirements to allow patients access to telehealth visits in any location.
- Reimburse providers the same amount for telehealth services as in-person visits.
- Allow Medicare payment for audio-only services.
- Allow patients to access telehealth services across state lines as appropriate.
- Allow for virtual supervision of residents by teaching physicians.
- Allow “authorized practitioners” to prescribe buprenorphine via telehealth.
- Improve access to broadband technology.
- Eliminate the skilled nursing facility (SNF) three-day prior hospitalization requirement.
- Expand the delivery of inpatient care in patients’ homes.
- Consolidate all health-related waivers under the authority of the Health and Human Services (HHS) Secretary.
Telehealth Flexibilities

Teaching hospitals, faculty physicians, and other providers have responded to the PHE and the waivers and flexibilities provided by Congress by rapidly implementing telehealth in their settings and practices in order to provide continued access to medical care for their patients. Telehealth provides both patients and providers with a variety of benefits and expands access to care, especially to those in rural and other underserved areas.

- **Increased Access for Patients Improves Care:** Data from the Clinical Practice Solutions Center (CPSC),¹ which contains claims data from 90 physician faculty practices, shows that in March and April 2020, faculty practices on average were providing approximately 50% of their ambulatory visits via telehealth, a dramatic increase from the use of telehealth prior to the pandemic. This is consistent with reports from CMS regarding telehealth services provided to Medicare beneficiaries during that time frame.² The use of telehealth expands care for the frail or elderly, for whom travel to a provider or facility is risky or difficult even when there is no pandemic. Telehealth also protects patients from exposure to infectious diseases, including COVID-19 and the seasonal flu. Physicians can effectively use telehealth to monitor the care of patients with chronic conditions, such as diabetes and heart conditions, reducing their risk of hospital admissions.

- **Increased Access to Specialist Care:** The use of telehealth enables specialists, such as pediatric specialists, cancer specialists, and critical care physicians, to bring their skills to rural areas and other areas that may not have subspecialty care in their communities. Immediate availability of a pediatric infectious disease specialist or a stroke critical care physician via telehealth can be life saving for those in remote, rural, or small size communities. In addition, telehealth can be used effectively to provide asynchronous consultation for front line providers. Patients can benefit from more timely access to the specialist’s guidance and payers benefit from a less costly service by avoiding the new patient visit with a specialist.

- **High Patient Satisfaction:** Analyses of surveys of more than 30,000 patients conducted by Press Ganey for services in March and April 2020 show that patients feel overwhelmingly positive about their virtual interactions with health care providers.³ According to a recent *Health Affairs* article, 79% of patient respondents reported satisfaction with their telehealth visit and 78% felt that their health concern could be addressed via telehealth.⁴

¹ The Clinical Practice Solutions Center (CPSC), owned by the Association of American Medical Colleges and Vizient, is the result of a partnership that works with member practice plans to collect data on provider practice patterns and performance. This analysis included data from 65 faculty practices.
Due to statutory limitations, most of the current flexibilities are only in place until the end of the PHE. The AAMC believes telehealth is an important method to deliver health care in many circumstances and urges Congress to make legislative changes that would preserve these new practices and the gains we’ve made in telehealth to date, and to ensure that reimbursement remains at a level that supports the infrastructure needed to provide this level of telehealth services.

The AAMC recommends the following:

**Congress Should Remove Patient Location Restrictions and Rural Site Requirements**

The AAMC strongly supports changes made by Congress that waived patient location restrictions that applied to telehealth service during the PHE. These changes have enabled CMS to pay for telehealth services furnished by physicians and other health care providers to patients located in any geographic location and at any site, including the patient’s home, during the PHE. We also thank Congress for including changes in the Consolidated Appropriations Act, 2021 that permanently allow patients to receive mental health services via telehealth regardless of the geographic location requirements ordinarily applicable to Medicare telehealth services.

These changes have allowed patients to remain in their home, reducing their exposure to COVID-19 and reducing the risk of exposing another patient or their physician to COVID-19. Maintaining such a change even after the threat of the pandemic is contained would allow patients who find travel to an in-person appointment challenging to receive vital care, especially for patients with chronic conditions or disabilities who need regular monitoring. The AAMC encourages Congress to remove the rural site requirements and allow the home to be an originating site.

**Providers Should be Paid the Same Amount for Telehealth Services as Services Delivered In-Person**

The AAMC strongly recommends that providers be paid the same for furnishing telehealth services as services delivered in person. The quality and cost of care delivered is not different if the patient is seen via telehealth. We recommend Congress provide a facility fee under the outpatient prospective payment system for telehealth services provided by physicians that would have been provided in the provider-based entity.

Teaching hospitals and faculty practice plans have highlighted significant infrastructure costs to fully integrate their electronic health record systems with HIPAA-compliant telehealth programs. Physicians and hospitals employ medical assistants, nurses, and other staff to engage patients during telehealth visits and to coordinate care, regardless of whether the services are furnished in person or via telehealth. Before the virtual visit occurs, the physicians and other health care professionals must be provided the technology they need and acquire a platform to use for the visits. Other staff will contact patients to complete registration, obtain consent for a telehealth visit, and ensure that the patient receives the email with a link to participate in the virtual visit. In
addition, staff will educate the patients on the use of technology as needed to ensure they are able to participate in the visit.

On the day of the visit, clinical staff reach out to the patient to provide intake services (e.g. ask for chief complaint, symptoms, weight, temperature and help the patient identify a review of current medications and therapies) prior to the patient visit with the physician or health care professional. The patient then participates in the visit with the physician, and at the conclusion of the visit, the physician must arrange any follow-up plan for the patient related to their care. Staff will follow-up as needed to schedule any additional visits for the treating physician or subspecialty referral, tests, or laboratory studies.

Without sufficient reimbursement, providers may no longer be able to continue to provide the current level of telehealth services to their patients.

**Congress Should Allow Payment for Audio-Only Services**

CMS established a separate Medicare payment for specific audio-only services to provide reimbursement at the same rates as in-person visits. However, the final 2021 physician fee schedule rule stated that this separate payment will no longer exist after the PHE ends, since CMS does not have the statutory authority to allow coverage and payment for telephone evaluation and management services.

Audio-only calls improve access to virtual care for patients who do not have access to the devices or broadband for audiovisual calls, are not comfortable with digital technology, or do not have someone available to assist them. During the PHE, coverage and payment for audio-only calls has been critical to ensure access to care for many patients. Physicians have been able to provide a wide array of services efficiently, effectively, and safely to patients using the telephone.

Data from the CPSC shows that approximately 30% of telehealth services were provided using audio-only telephone technology in April and May 2020. The proportion of telephone/audio-only visits increased with the age of the patient. CMS data show that nearly one-third of Medicare beneficiaries received telehealth by audio-only telephone technology from March through June 2020, which is consistent with CPSC data.

Many factors contribute to the high use of audio-only services. Patients in rural areas or those with lower socioeconomic status are more likely to have limited broadband access and may not have access to the technology needed for two-way audio-visual communication. The Pew Research Center found that about a third of adults with household incomes below $30,000 per year do not own a smartphone and about 44% do not have home broadband services.6

---

Some providers report that even when their patients have access to technology that would allow for audio-visual communication, they may be unable to use the technology without assistance, thus limiting them to telephone use. For these patients, the only option to receive services remotely is through a phone. Without coverage and payment for these audio-only services, there will be inequities in access to services for these specific populations. We urge Congress to permanently make changes to allow coverage and payment for audio-only services.

**Congress Should Allow Patients to Access Telehealth Services Delivered Across State Lines**

As part of the COVID-19 response, Congress and CMS have allowed providers to be reimbursed by Medicare for telehealth services across state lines. This waiver creates an opportunity to improve patient access to services and to help improve continuity of care for patients who have relocated or who have traveled to receive their surgery or other services from a specialist in another state. While CMS has the authority to allow for payment under federal programs, states need to act to allow practice across state lines to occur.

The AAMC urges Congress to pass the Temporary Reciprocity to Ensure Access to Treatment Act (TREAT Act, S. 168, H.R. 708). This bipartisan, bicameral legislation would expand care for patients by creating a temporary uniform licensing standard for all practitioners and professionals that hold a valid license in good standing in any state to be permitted to practice in every state – including in-person and telehealth visits – during the COVID-19 public health emergency.

**Congress Should Allow for Virtual Supervision of Resident Physicians**

During the PHE, CMS has allowed resident physicians to furnish telehealth services that are virtually supervised by the teaching physician. In the physician fee schedule final rule, CMS states that this policy regarding telehealth will be allowed on a permanent basis only in rural sites.

Resident education is a crucial step of professional development before autonomous clinical practice and requires varying levels of faculty supervision depending on where the resident is in training and developing competency. As part of this development, it is essential for residents to have the experience with telehealth visits while supervised as they will be providing them in the future to their patients when they practice autonomously.

The AAMC recommends that CMS allow residents to provide telehealth services permanently while a teaching physician is present via real-time audio-visual communications technology after the PHE ends in all regions of the country. This change to CMS policy will improve patient access to care while also enhancing the resident’s skills.

**Congress Should Allow “Authorized Practitioners” to Prescribe Buprenorphine via Telehealth**

The AAMC supports the Substance Abuse and Mental Health Services Administration’s and Drug Enforcement Agency’s temporary change to allow “authorized practitioners” to prescribe
buprenorphine to new and existing opioid use disorder patients for maintenance or detoxification treatment via telehealth examination without the need for a prior in-person visit. We urge Congress to make this change permanent to ensure this important expansion is not limited solely to the current PHE.

**Congress Should Takes Steps to Improve Access to Broadband Technology**

In many parts of the country, providers and their patients have limited access to broadband connectivity, which has been a major barrier to use of telehealth. This is particularly true for rural areas and underserved communities. The Federal Communications Commission has reported that 30% of rural residents lack broadband services.\(^7\) Also, racial and ethnic minorities, older adults, and those with lower levels of socioeconomic status are less likely to have broadband access. In order to expand access to telehealth and other important online services, we recommend that Congress take steps to increase funding for broadband access and infrastructure development.

**Other Targeted Health Care Flexibilities**

_**Eliminate the SNF three-day prior hospitalization requirement.**_

CMS has waived the requirement for a three-day prior hospitalization for coverage of a SNF stay, which provides temporary emergency coverage of SNF services without a qualifying hospital stay for those people who experience dislocations or are otherwise affected by COVID–19. The AAMC supports this waiver and recommends that the SNF three-day prior hospitalization requirement be eliminated permanently to better coordinate and improve care for patients. Eliminating the three-day stay would rely on physicians’ judgment to ensure that their patients receive the most appropriate care in the most appropriate settings without creating the possibility of an unforeseen financial burden on the patient.

_**Expand the Delivery of Inpatient Care in Patients’ Homes**_

CMS launched the Hospital Without Walls program in March 2020 to allow hospitals to provide services beyond their existing walls to help address the need to expand care capacity and to develop sites dedicated to COVID-19 treatment. The Acute Hospital Care At Home program is an expansion of this initiative that allows eligible hospitals to have regulatory flexibility to treat certain patients, who would otherwise be admitted to the hospital, in their homes and receive Medicare payment under the Inpatient Prospective Payment System.

The Acute Hospital Care At Home program launched with six health care systems that have experience with providing acute hospital care at home. To date, 129 hospitals within 56 systems located in 30 states – including many academic medical centers – have received waivers from CMS to participate in the program.\(^8\) The increase in hospital participation underscores the need

\(^8\) Updated as May 14, 2021. Updated list available at: https://qualitynet.cms.gov/acute-hospital-care-at-home/resources
The AAMC supports the flexibility and benefits this program provides for patients and urges Congress to maintain these flexibilities after the end of the PHE.

**Consolidate All Health-Related Waivers Under the Authority of the HHS Secretary**

The AAMC is appreciative of the temporary health care-related regulatory flexibilities and emergency authorities granted by the federal government in response to the coronavirus. These flexibilities have been granted by the White House, HHS, and CMS, among others. To better coordinate these flexibilities, the AAMC recommends that all health-related waivers be consolidated under the authority of the HHS Secretary.

For example, Section 1135 waivers have offered essential relief and assistance for health care providers during the pandemic by relaxing several requirements, including practice across state lines and timelines for federal reporting requirements. For the 1135 waivers to remain in effect, both a public health emergency and a national emergency must be declared by the HHS Secretary and President, respectively. The AAMC recommends that all health-related flexibilities be under the direction of the HHS Secretary, and not reliant upon the declaration of a national emergency.

**Conclusion**

The AAMC is very grateful for the work that this Committee, the Congress, and the Administration have done to provide important flexibilities to allow for the expansion of health care delivery during the COVID-19 pandemic. We appreciate that the Senate Finance Committee is reviewing many of these flexibilities and thinking about how to incorporate them into the health care system beyond the end of the public health emergency.

Please feel free to contact AAMC Chief Public Policy Officer Karen Fisher, JD (kfisher@aamc.org) or AAMC Senior Director of Government Relations Leonard Marquez (lmarquez@aamc.org) with any questions or if we can provide more information. We look forward to continuing to work with you on these important issues.
