

June 2024

The primary mission of the AAMC's Group on Institutional Planning (GIP) is to advance the discipline of planning in academic medicine by enhancing the skills and knowledge of professional planners; to promote the value of planning; and to connect people, resources, and ideas.

GIP News and Business

Important Information for GIP Members

AAMC Member Services is performing an annual data review for members of AAMC professional development groups. You should have received an email on May 28 with the subject line "Verify your membership in AAMC groups." Please take a minute to respond - we appreciate it! If you have any questions, contact AAMC Constituent Relationship Senior Specialist Katina Beale at kabeale@aamc.org.

Recording Available: Data-Driven Academic Medical Centers (DDAMC) Work Group Call

During the May DDAMC call, AAMC's Alex Geboy, MS, Research Director, Medical School Business Operations, provided an overview of the AAMC Operations Management Tool (OMT) and AAMC Data. You can [view the presentation via Vimeo](#).

For more information on the DDAMC work group, please visit the GIP Subcommittee webpage and please contact Natalie Floyd if you would like to join the work group.

AAMC endorses resolution recognizing the importance of DEI in medical education

Congresswoman Joyce Beatty (D-Ohio), co-chair of the Congressional Black Caucus' Diversity, Equity, and Inclusion (DEI) Task Force, and Congresswoman Kathy Castor (D-Fla.), co-chair of the Congressional Academic Medicine Caucus, introduced a resolution recognizing the importance of DEI in medical education. In support of the resolution, David J. Skorton, MD, president and CEO of the AAMC, said, "Medical schools are in the best position to identify how to prepare their students to meet the needs of the physician workforce and must have the autonomy and flexibility to do so. When a medical school recognizes the benefits associated with cultivating student belonging—fostering educational benefits associated with all types of diversity, ensuring equal educational opportunities for their students, and providing instruction on evidence-based knowledge they deem to be fundamental—it is within their purview and their responsibility to pursue those efforts."

Join the initiative to accelerate the national climate and health movement

The National Academy of Medicine (NAM) [Action Collaborative on Decarbonizing the U.S. Health Sector](#), of which the AAMC is a member, has launched a new initiative to further build and sustain the momentum of the national climate and health movement. This initiative will broaden the national movement to mobilize health-related organizations, provide guidance and resources, and facilitate relationships across participating organizations. Any health-related organization is welcome to join the NAM in accelerating the national climate and health movement. [Read More](#)

Learning Opportunities

Register for AAMC Center for Health Justice interactive discussion on public perspectives on reparations in America

Registration is now open for an interactive discussion on June 5 with the AAMC Center for

Health Justice to explore public perspectives on reparations in America. The virtual discussion will provide an overview of 2024 [reparations polling data](#), as well as how it impacts the work of health justice. Registration is free but required. [Register Now](#)

A Disruptive Connector: Learning & Experimenting with Generative AI Together

June 11, 2024 12:00 PM (ET)

In this webinar, participants will learn how collaborators from Mayo Clinic and Karolinska Institute worked together to provide an opportunity for international medical educators to learn with and from one another about generative AI while using generative AI in a supportive, inclusive environment. New AAMC Research and Action Institute data snapshot shows states with abortion bans see continued decrease in U.S. MD senior residency applicants

A new data snapshot developed by the [AAMC Research and Action Institute](#) provides an updated analysis of the training location preferences of U.S. medical school graduates two years after the U.S. Supreme Court overturned *Roe v. Wade* with the 2022 decision in *Dobbs v. Jackson Women's Health Organization*. The data show that the number of new medical graduates from U.S. MD programs applying to residency programs decreased; and that those decreases were more pronounced in states that banned abortions

compared to states without bans. The examination of two years of data suggests that restrictions on women's health care may continue to disproportionately decrease the likelihood that U.S. MD seniors will apply for residencies in states with the most restrictive practice environments. Federal Agencies Warn Health Care Sector of Emerging Ransomware Threat

HHS, the Cybersecurity and Infrastructure Agency (CISA), the FBI, and the Multi-State Information Sharing and Analysis Center issued an advisory warning health care organizations and other critical infrastructure entities of the [Black Basta ransomware attack](#) and encouraging them to implement mitigations. The advisory explains that affiliates of Black Basta access systems through methods, such as phishing, and then encrypt and exfiltrate data, giving victims 10 to 12 days to pay ransom before the compromised data is posted publicly.

The agencies note that cybercriminals target health care organizations due to their size, technological dependence, access to personal health information, and the ability to cause disruptions to patient care. The agencies urge health care and public health sector and all critical infrastructure organizations to implement certain recommendations to mitigate risk, including those listed in the [#StopRansomware Guide](#). The HHS continues to encourage providers to implement the voluntary [Healthcare and Public Health Cybersecurity Performance Goals](#).

New AAMC Research and Action Institute data snapshot examines market consolidation of health systems and insurers

To better understand the presence of consolidation across the U.S. health care system, the [AAMC Research and Action Institute](#) has published a new data snapshot that compares the market share of providers to that of insurers to show the implications of consolidation across these two industries. The authors found that, despite concerns from policymakers and the public, the largest health systems by total inpatient hospital discharges have, on average, far less market share - a combined 43.1% of the market share in each state - compared to the top three large-group insurers, which hold an average of 82.2% of the market share in each state.

"What the Health?" Podcast Explores Data Analysis Showing Medical Residents Are Increasingly Avoiding Abortion Ban States

Atul Grover, MD, PhD, executive director of the AAMC Research and Action Institute, [recently joined KFF Health News' "What the Health?" podcast](#) to discuss a new analysis of the training location preferences of U.S. medical school graduates two years after the U.S. Supreme Court overturned *Roe v. Wade*. The [data snapshot](#) shows that the number of new medical graduates from U.S. MD programs applying to residency programs decreased; and that those decreases were more pronounced in states that banned abortions compared to states without bans.
