

THE AD HOC GROUP FOR MEDICAL RESEARCH

The undersigned members of the Ad Hoc Group for Medical Research, which include patient groups, scientific societies, research institutions, health professionals, educators, and industry, are exceptionally grateful to Congress for making meaningful, reliable funding support for the National Institutes of Health (NIH) a key national priority. The nation's return on investment in NIH research pays a lifetime of dividends in better health and quality of life for all Americans.

Through the strong, bipartisan leadership of House and Senate Labor-HHS-Education Appropriations Subcommittee Chairs Tom Cole and Roy Blunt and Ranking Members Rosa DeLauro and Patty Murray, Congress is helping the agency regain lost ground after years of effectively flat budgets. In the fiscal year (FY) 2018 omnibus, lawmakers continued to make progress reversing those losses by providing a substantial increase to all NIH institutes and centers, in addition to dedicated funding through the 21st Century Cures Act and other funding devoted to specific priorities.

In FY 2019, the Ad Hoc Group recommends at least \$39.3 billion for the NIH, including funds provided to the agency through the 21st Century Cures Act for targeted initiatives. This funding level would continue the momentum of recent years by enabling meaningful base budget growth above inflation to expand NIH's capacity to support promising science in all disciplines, and also would ensure that the Innovation Account supplements the agency's base budget, as intended, through dedicated funding for specific programs. Given the abundance of scientific opportunity, this recommendation represents a minimum investment to sustain progress that only would be amplified through an even more robust commitment.

The federal investment in biomedical research has yielded a significant number of scientific advances that help improve health outcomes of patients suffering from disease. We are committed to working with Congress and the Administration to further the longstanding, bipartisan tradition of enhancing the federal investment in medical discovery, and ensuring NIH remains a top priority in FY 2019 and beyond.
