

THE AD HOC GROUP FOR MEDICAL RESEARCH

October 4, 2018
United States House of Representatives
Washington, DC 20515

Dear Representative:

The Ad Hoc Group for Medical Research, a coalition of over 300 patient and voluntary health groups, medical and scientific societies, academic and research organizations, and industry, dedicated to enhancing the federal investment in biomedical, behavioral, social, and population-based research supported by the National Institutes of Health (NIH), writes to express our deepest appreciation for your vote to pass H.R. 6157 with the fiscal year (FY) 2019 Labor, Health and Human Services, Education, and Related Agencies (Labor-HHS) appropriations bill. The \$2 billion increase for medical research in FY 2019 translates to real hope and opportunity for every patient awaiting a cure, every researcher working toward the next breakthrough, and every aspiring scientist considering a career in the lab.

We continue to be extremely thankful for Congress's ongoing commitment to NIH funding increases, as the greatest research builds upon previous discoveries through continued, steady and robust support for the agency. Building on this foundation, the \$2 billion increase in FY 2019 will enable meaningful growth across the full spectrum of research supported by the NIH, while positively impacting local economies in every state and Washington, D.C. This sustained investment in NIH acts as a catalyst for a steady pipeline of basic research discoveries and helps sustain the translational and clinical efforts necessary to improve the detection, diagnosis, treatment, and prevention of disease.

Our country has the most impressive medical research capacity in the world. The new funding provided for NIH in FY 2019 will allow the United States to keep its competitive edge in an increasingly innovation-based global marketplace. Our nation will remain a leader in medical research because of Congress's bipartisan recognition of NIH's critical role.

Thank you very much for your continued support for biomedical research, and the hope it provides to patients across the country.

Sincerely,

Tannaz Rasouli
Executive Director
The Ad Hoc Group for Medical Research
