Ad Hoc Group Statement on FY 2019 Budget Proposal

February 13, 2018 – The Ad Hoc Group for Medical Research issued the following statement in response to the proposed funding level for the National Institutes of Health (NIH) in the president’s fiscal year (FY) 2019 budget request released Feb. 12:

The return on investment in the NIH pays a lifetime of dividends in better health and quality of life for Americans, young and old. Yet, rather than strengthening the federal commitment to the NIH, the president’s FY 2019 budget proposal effectively would freeze funding for the agency at a level that falls below what Congress has proposed for even FY 2018.

Stagnant funding postpones hope for patients across the country and narrows the opportunity for breakthroughs in the biomedical research enterprise. In fact, when adjusting for inflation, the NIH already has lost nearly 20 percent of its purchasing power over the last decade. Thankfully, lawmakers in Congress on both sides of the aisle have rallied together to help the agency begin to regain lost ground by boosting the NIH budget in recent years.

We cannot backtrack now. For the United States to enhance its pursuit of cures – and to continue its global leadership in science and technology – the nation must continue the recent trajectory established by Congress and provide steady, meaningful funding increases above inflation within the base NIH budget. The Ad Hoc Group looks forward to working with lawmakers to realize this vision and bring patients one step closer to the assurance of better health in FY 2019 and beyond.
